

Game Theory / Wargame Reader Pack - 2026-05-29

Status: local-file Lantern Reader and RAG intake artifact.

Scope: only the five user-named PDFs in `C:\Users\alexp\Downloads`. No broad drive search is promoted here.

Extraction method: Python `pypdf` metadata, page counts, SHA256 hashes, and top term signal from the first 12 pages. Repo output is summary-only and does not copy book text.

Source Receipts

Local file	Pages	Bytes	SHA256	Intake state
`C:\Users\alexp\Downloads\OsborneRubinsteinMasterpiece.pdf`	368	2238460	`70733E532FFBCD7A010F5C9FC041DDB07EAB56F9CAACD860E2AD4578FCCD22C8`	summarized only

Total local source pages: 1758.

Compressed Signals

Source	Signal for Lantern / BETTER
Osborne and Rubinstein game-theory text	Core strategy substrate: Nash reasoning, extensive-form games, bargaining, repeated interaction, mixed strategies, and information structure.
Dutta strategy-and-games text	Application bridge: examples, auctions, information, case studies, and model-to-practice translation.
Dunnigan wargames handbook	Simulation design substrate: rules, scenarios, adjudication, player behavior, and tabletop/computer wargame constraints.
AD1038115 wargame/training paper	Public-safe defense-training signal: wargames as structured simulation for understanding force, training, and decision phenomena, not as weapon instruction.
Osborne introduction text	Teaching/reference substrate: equilibrium, extensive form, repeated games, subgame reasoning, and economic examples.

Lantern Convergence Decision

Promote these PDFs as a strategy-model reader pack, not as raw repo content.

Lantern should absorb them as:

- `game\_theory\_strategy\_reference`;
- `wargame\_simulation\_reference`;
- `hft\_spread\_game\_model\_reference`;
- `adversarial\_decision\_training\_reference`;
- `reader\_pack\_summary\_only`.

Lantern should not use these PDFs to claim:

- live trading edge exists;
- autonomous HFT should execute without human approval;
- wargame material is operational military guidance;
- copyrighted books may be republished into the repo;
- higher confidence exists without current market/orderbook validation.

Applied To Kalshi / HFT

The useful link to the Kalshi report is strategic, not executable:

- spreads become a maker/taker game, not merely a cost;
- orderbook depth, queue position, cancel risk, and fees become payoff terms;
- adverse selection becomes the opponent model;
- manual approval remains the final move before any real account action;
- paper-trading and simulation are the first HFT lane.

Reader Link

Open through the Lantern Reader:

<http://127.0.0.1:4177/view?path=manifests/evidence/game-theory-wargame-reader-2026-05-29.md>

Next Safe Action

Build a small paper-trading simulator that scores spread-capture candidates against orderbook depth, fee assumptions, fill probability, and max-loss rules.

Do not connect authenticated trading credentials until the simulator and human approval gate are validated.
