

Kalshi + Ko-fi Watchlist Revenue Report

Generated: 2026-05-29T22:15:31.4060179-04:00

Status: current public-data manual-review candidates and outreach packet; no trades executed.

Boundary

- This is not financial advice, investment advice, or a guarantee of profit.
- No Kalshi order was placed and no authenticated trading endpoint was used.
- No pooled capital, copy-trading, trade signals, or managed account offer.
- A market can become a trade candidate only after an independent probability estimate, max-loss budget, fee check, and manual review.

Sources

- Kalshi public homepage: ``https://kalshi.com/``
- Kalshi public markets endpoint: ``https://external-api.kalshi.com/trade-api/v2/markets?status=open&mve_filter=exclude&limit=1000``
- Kalshi docs: ``https://docs.kalshi.com/api-reference/market/get-markets``

Snapshot

Metric	Value
Open markets pulled	5000
Public pages pulled	5 / 5
Cursor present	True
Empty/no-activity markets	2833
Wide-spread research-only markets	776
Excluded below 20-cent midpoint	1295
Excluded below \$5.00 visible activity	3188
Watchlist rows emitted	20
Manual-approval queue rows	3
Executable trade recommendations	0
Trade readiness	research only; not actionable-trade ready
Manual review budget requested	\$19

Right Now Answer

Executable trades to make right now: `**0**`.

Best current use of this data: manually review the top watchlist rows, open the market rules in Kalshi, and build an independent probability note before any trade decision. Tight spread and activity make a market worth reading first; they do not prove edge.

Filters applied: do not include market values below 20 cents of YES midpoint, and do not include markets below \$5.00 visible public activity.

Profit range is gross per contract if buying YES at the displayed ask: maximum loss is the ask paid; maximum gross profit is \$1.00 minus the ask, before fees and slippage. Confidence is data-quality confidence only, not outcome probability.

After loading more data: Lantern can emit a manual-approval queue, but it still cannot place live trades. A human must approve any account action after independent probability, rule, fee, slippage, and max-loss checks.

Paper-ticket output: data/kalshi/kalshi-paper-trade-tickets-latest.json. Trade docs gate: manifests/evidence/kalshi-api-docs-and-trade-gate-2026-05-29.md.

Spread course: custom HFT/spread-capture research is preserved. Wider spreads can be desirable for a maker strategy, but only after orderbook depth, queue position, fees, latency, and cancel/fill risk are modeled.

`\$19` Manual Review Gate

Lantern is ready to prepare a public-data watchlist and research packet. It is not ready to make actionable trades, place orders, manage funds, or recommend that the operator buy or sell a market.

The \$19 lane is a manual-review budget marker only:

- no authenticated Kalshi endpoint;
- no order placement;
- no automated execution;
- no claim of edge until independent probability, fees, spread, and max-loss notes exist;
- final trading decisions remain outside Lantern.

Manual-Approval Queue

These rows are the closest thing to a trade queue after the deeper public-data load. They are not orders.

Rank	Ticker	Mid	Gross P/L	Data Conf.	Required Before Trade
1	KXMLBTOTAL-26MAY301605KCTEX-9	0.445	-0.45 to +0.55	70%	independent probability + human approval + max-loss budget
2	KXSPOTIFYD-26MAY29-HAT	0.955	-0.96 to +0.04	70%	independent probability + human approval + max-loss budget
3	KXHIGHTPHX-26MAY30-B92.5	0.385	-0.39 to +0.61	70%	independent probability + human approval + max-loss budget

Custom HFT / Spread-Capture Research Queue

This is the custom HFT direction: spread-aware, maker-style research. It is not live trading and it does not use account credentials.

Rank	Ticker	Mid	Spread	Activity	Gross P/L	Required Before Live
1	KXITFMATCH-26MAY29SHIKIM-KIM	0.240	0.020	9007.95	-0.25 to +0.75	orderbook depth + fee model + latency sim + human approval

Stats Model

Model name: `liquidity\_spread\_watchlist\_v0`.

Inputs used:

- YES bid / ask / midpoint.
- Bid-ask spread.
- 24h volume, total volume, liquidity, and open interest.
- Visible activity floor and custom HFT spread-capture queue.
- Days to close.
- Title clarity and combo-market penalty.

What the model does:

- ranks markets worth reading first;
- rejects empty no-activity markets from the top list;
- flags wide-spread markets as research-only;
- preserves the trading gate: no order without independent probability and bankroll limit.

What the model does not do:

- it does not estimate true probability;
- it does not predict profit;

- it does not place trades;
- it does not sell trade signals.

Ko-fi Revenue Lane

Use Ko-fi for support and paid research operations, not trade pooling.

Offer	Price	Deliverable	Boundary
Public supporter note	`\$5`	Early watchlist snapshot and methodology note	no trade signals
Founder/support tester	`\$20`	Weekly public-data market watchlist plus Lantern setup support	no managed money
Custom stats cleanup sprint	`\$99-\$299`	One repo/data/source cleanup plus a reproducible report	no investment advice

Outreach Copy

Short Ko-fi post:

> I pulled a live Kalshi public-market snapshot and turned it into a no-hype watchlist report: liquidity, spreads, close dates, and model gates. No trade signals, no pooled money, no guaranteed profit. If you want more open-source local-first stats tooling like this, support Lantern OS here: <https://ko-fi.com/alexplace>

Warm DM:

> I am testing a Lantern OS stats workflow: public Kalshi markets in, clean watchlist/report out. It ranks what is worth researching and blocks actual trade claims until independent probability work is done. If that kind of transparent AI/data tool is useful, I have a `\$20` support lane on Ko-fi: <https://ko-fi.com/alexplace>

Next Manual Actions

1. Review the top 20 watchlist rows manually in Kalshi UI.
2. Choose 3 markets with clear rules and real liquidity.
3. Build independent probability notes for those 3 markets from public sources.
4. If any edge exists after fees and spread, record a max-loss budget before any trade.
5. Publish the Ko-fi support note as a support/product update, not a trading advice post.
